

Producing sustainable lignin-derived bio-aromatics for the food, cosmetics, rubber, polymer, fuel and lubricants industries.

WHAT IS ZEBRA-LIFE?

- Transformation of a pulp and paper industry sub-product (lignin contained in the black liquor) into high added value products with high antioxidant and UV filtering properties.
- Demonstration of their potential to substitute the existing fossil fuel-based additives in the market by testing them in the different targeted industries.

OBJECTIVES

- Reduce the environmental and health impacts caused by the production and use of synthetic fossil-based additives in multiple industrial products.
- Increase the renewable energy share and decarbonisation in the pulp and paper industry
